Subject: Re: Cabot letter

Here is the information we got on Dimock asking for assistance on Firday. It also came with a flurry of calls on Friday saying the water was being shut off.

What is left to be said or happen to get EPA to have an emergency community outreach meeting with Carter Rd residents whose drinking water has been determined by DEP by Duke by Independent Labs to have been affected by shale gas activities through isotopic analyses. Please see the attached DEP INTERNAL DISCUSSIONS about the stray methane in Dimock. When can EPA meet with affected residents whose state (PA) is letting the industry walk away from accountability.

What date works for an EPA Emergency Meeting?

Sincerely, Rebecca Roter 267-733-5211
